Channels in Straits of Mackinac, MI

Project Features

- One of the Great Lakes connecting channels; the Straits of Mackinac are located between Michigan's Upper and Lower Peninsulas and connect Lake Michigan with Lake Huron
- Authorization: Rivers & Harbors Acts of 30 Aug 1935 and 23 Mar 1956
- Deep draft commercial project that provides for a 1,250 foot wide channel between Mackinac Island and Round Island; and for removal of the Poe Reef shoal
- Project depth is 30 feet
- Approximately 3,500 feet in length
- Major stakeholder: Majority of Great Lakes shipping interests and U.S. Coast Guard

Project Requirements

- The channels were dug in hard bottom areas of the Straits of Mackinac; consequently, they require infrequent maintenance. It is anticipated that all future maintenance will consist of occasional strike removal operations.

Consequences of Not Maintaining the Project

- Significant loss of jobs locally, regionally, and internationally
- Access between Lake Superior and the lower Great Lakes would be cut off
- Key component of the Great Lakes and St. Lawrence Seaway navigation system; disruption of service would have severe maritime and economic impacts.

Transportation Importance

- Key connecting channel between Lake Superior and the lower Great Lakes and the St. Lawrence Seaway
- This project is vital to both domestic and international maritime interests using the Great Lakes and St. Lawrence Seaway.
- Commodities transported through these channels include coal, iron ore, limestone, wood pulp, petroleum products, salt, and other general cargo.
