Duluth-Superior Harbor, MN and WI

Harbor Features

- Located at the western end of Lake Superior
- Authorization: Rivers & Harbors Act of 3 Jun 1896
- Deep draft commercial harbor
- Project depths: 28 to 32 feet in the entrance, 27 feet deep in the commercial route channels, and 20 to 23 feet in inner channels
- 35.1M tons of material shipped and received in 2018
- Ranked 1st in tonnage among Great Lakes harbors and 20^h among U.S. ports in 2018
- Over 10,000 feet of structures including breakwaters, piers and revetments
- Over 18 miles of maintained channel
- Erie Pier Confined Disposal Facility (CDF), located within the St. Louis Bay; has only 3 to 5 years of capacity remain
- Since 2013, dredged material has been placed in the 21st and 40th shallow water embayments in the harbor, used locally as beach nourishment at MN Point, and in the construction of environmental remediation and endangered habitat projects.
- Major stakeholders: U.S. Coast Guard, Azcon, BNSF, C. Reiss Coal, Calumet Superior, Canadian National, Cenex Harvest States, CHS, Cleveland-Cliffs, Cutler Magner, Duluth Lake Port, Gavilon Grain LLC, General Mills/Cargill, Greymont LLC, Hallet Dock, Hansen-Mueller Co., Holcim Inc., Lafarge, Marine Tech LLC, Midwest Energy, Murphy Oil, North American Salt Co., Northland Bituminous, and Riverland Aggregates

Project Requirements

- Approximately 110,000 cubic yards of material must be dredged each year.
- The harbor was last dredged in 2019 and is scheduled to be dredged again in 2020.

- Dredged material will be placed along MN Point beaches in 2020 to mitigate shoreline erosion.
- Outer portion of Superior Entry north pier repair by contract with FY19 and FY20 funds.
- Repairs to Superior Entry north revetment began in 2016 by government floating plant and will continue.
- Design is needed for shoreline protection on north side of Duluth office facility due to high water and storm impacts.

Consequences of Not Maintaining the Project

- If the harbor closed to commercial traffic, commodities would have to be transported by rail and truck. This would increase annual emission rates by over 278M lbs of harmful particulate matter (PM-10) and increase costs by \$51.8M due to increased railroad related accidents and \$83.8M due to increased trucking related accidents.
- Light loading; losses of between 1 and 2 feet of channel depth results in increased transportation costs of between \$1.3M and \$7.7M annually.

Transportation Importance

- Major international port on the Great Lakes and harbor of refuge; westernmost harbor in the United States with direct access to the Atlantic Ocean
- Commodities shipped or received include iron ore, coal, forest products, petroleum, grain, general cargo, steel, and scrap iron.
- Waterborne transportation facilitated by the harbor supports \$1.18B in business revenue, 4,582 direct, indirect, and induced jobs, and \$336.4M in labor income to the transportation sector.

- Commodities handled by the harbor support \$33B in business revenue, 174,955 direct, indirect, and induced jobs, and \$9.2B in labor income.
- Home port of U.S. Coast Guard’s 225-foot-long cutter Alder. Home to U.S. Coast Guard auxiliary station and Marine Safety Unit, responsible for port safety and security, marine environmental protection, and commercial vessel safety missions under the auspices of the Department of Homeland Security.
- Port of Call for Great Lakes Cruise Vessels
